EUROVENT STANDARTAI ŠALDYMO BOKŠTAMS (ANGLŲ KALBA)

MECHANICAL DRAUGHT SERIES COOLING TOWERS

The purpose of EUROVENT Certification for mechanical draught series cooling towers is to assure proper thermal rating and consistency of data by regular independent third party testing. The participation in this programme is voluntary and is open to all manufacturers of mechanical draught series cooling tower in EUROPE.

The EUROVENT certified product ranges are identified by their listing in this Directory and by the display of the certification symbol together with the identification number on the certified cooling towers.

This symbol guarantees specifiers and owners that products marketed by a participant have been accurately rated. If during a test a product falls below catalogue performance by more than the specified tolerance the participant will be required either to rerate the entire line of products or withdraw the model. Participants may challenge the ratings of competitors products and request that they are tested.

These stringent procedures ensure a high integrity of the programme and provide specifiers and owners with the true performance data, eliminating the need for extra safety or expensive individual testing.
